

Knauf Joint Tape

Knauf joint tape is mainly used for board joint treatment of Knauf partition walls and ceiling systems. It is used in conjunction with Knauf joint filler to form a sturdy and flat non cracking joint system, laying a good foundation for surface finishing.

Scope of use: Seam and repair of various lightweight walls and ceilings. Can be used for board joint treatment of Knauf partition walls and ceiling systems, and used in conjunction with Knauf joint filler to form a sturdy and flat non cracking joint system.

Characteristics:

- Raw wood pulp paper with excellent quality
- Randomly distributed small holes, permeable and breathable, prevent the formation of bubbles
- Accurately creased for standard corner treatment
- Both the front and back sides have been sandblasted for a tighter bond, without the need for glue, saving time and labor

Product Specifications:

- Appearance: White rough paper tape with irregular micro
- Thickness: 0.23mm
- Width: 52mm
- Weight: 140g/m²
- Packaging specifications 20 rolls/box (76m/roll),
